DETAILED ACTION

1. Claims 1-9 are presented for examination.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-9 are rejected under 35 U.S.C. 102(e) as being anticipated by Lee et al., US pat. No.6,609,150 B2 (hereafter Lee).

As to claim 1, Lee discloses an image control system, comprising:

a plurality of portable terminals (wireless devices, col.5 lines 24-38) each connected to an Internet (53 fig.4) through a communication network and having an image display function in a dedicated image display format (see fig.4, abstract, col.11 lines 19-53) and a Web server (61 fig.4) for receiving an image information request, forming image information in a format allowing the portable terminal transmitting the request to be displayed (processing URL requests, see col.11 line 54 to col.12 line 45) and transferring the formed image information to be a file format allowing the portable terminal transmitting the request to acquire the formed image information through the Internet and

communication network (processing the web requests and sending to wireless devices, see col.12 line 46 to col.13 line 31).

As to claim 2, Lee discloses that the Web server includes an image forming module for implementing a format mutual conversion processing among various image display format with respect to the image information (see fig.5, col.12 lines 12-62).

As to claim 3, Lee discloses that the image forming module is operated on an operating system together with a Web server software, and implements a processing for image information of a Web service program to provide various information accompanying an image to the portable terminal without being through the Web server software (see col.11 line 33 to col.12 line 35).

As to claim 4, Lee discloses that the image forming module implements an image superimposition processing including a transmission processing, an image extension/reduction processing and an image processing including at least an image arranging processing (see col.9 lines 15-61 and col.11 lines 19-61).

As to claim 5, Lee discloses that the transmission processing is implemented with a transmission factor being varied (see col.9 lines 15-61 and col.11 lines 19-61).

Claims 6-8 are rejected for the same reasons set forth in claims 1, 2+3 and 4 respectively.

Art Unit: 2451

As to claim 9, Lee discloses the image processing is implemented by a loop repeat processing based on an image processing request (see col.9 lines 15-61 and col.11 lines 19-61).
